

Team 5 Meeting Minutes

Monday, March 13th, 2023

- Weekly sprint review meeting
- Individual Updates:
 - **King & Chris:**
 - Roadblocked on the user-player extension and will likely have to gut it and leave it half done until next Sprint. Will need to flush the database.
 - Found additional articles for research and will upload them to the teams.
 -
 - **Thomas & Jeffrey:**
 - Most of the frontend as far as authentication is complete
 - Completing research for the midterm presentation
 - Fleshing out placeholder pages and routing for the rest of the pages
 - Adding tickets to Jira for next sprint
 - Reviewed and completed testing suite
 - Keeping documentation up to date
 - Added more slides to the presentation template
 - Essentially refining the existing components in preparation for the demo
- Main purpose of current research articles is to find a direction and main topic for research so that they can inform us going forward.
- Thomas and Jeffrey to get a bearer token working to do frontend and backend authentication.
 - Jeffrey hitting obstacle with registration: To register a new user, we need a username and password, but how does that fit into the frontend? Right now the frontend works as an email and password.
 - Current backend problem is with the player extensions (attitude, playstyle, etc.).
 - Can use registration API to add new users. Should be good for initial registration.
 - The API test is the only one that requires that the bearer token be sent.
 - Chris will be available for any hotfixes and can send instructions on how to use the search fields.
- Chris is going to leave split registration as is and will work with King on
- Team is feeling confident about having basic version of login and registration services ready demo.
- Next Steps:
 -
