Team 5 Meeting Minutes
Monday, February 13th, 2023

- Weekly sprint review meeting
- Individual Updates:
  - **King**: Looking into authentication and management for SSO. Can share the current progress on request.
    - Chris has a working sample for Django SSO, frontend is incorrect however. Exposes three different methods.
    - Currently, data is being saved to a temporary session token. There is currently no remote database (AWS, Azure, etc.)
  - **Chris:** Figuring out authentication and its interaction with React, rebuilding the environment, the new backend will accept refresh and contain a test method to pull default data.
  - **Jeffrey:** Created initial wireframes for the application (authentication, user profile, user settings), working with Thomas to review created content. Researching testing for BDT. Will meet with Thomas for design and testing creation.
  - **Thomas:** Working on wireframe prototypes as well as reviewing Jeffrey's wireframes, uploaded up-to-date documentation on the repository, and emailed the professor about giving him access to the team's resources.
- What are the different interactions do we need to support?
  - Need to create a feature hierarchy document that explains the priority and necessity of each feature.
- What do we need to prioritize right now?
  - Remember me/Stay signed in - deprioritize as a cookie
  - Forgot password button - deprioritized (just an inactive button)
  - Login with Discord and Steam - Depends on who we choose, choose a 3rd party that is free to use. May be more trouble than it is worth, maybe Discord or Google.
  - No need for SSO on the registration page
- Chris is going to clear out the code sections of the GitHub repository.
- Next Steps
  - Code for backend authentication
  - Finishing wireframes for other pages
  - Login and registration prototype completion.
  - Feature prioritization document
