Team 5 Daily Scrum Minutes

Not all daily scrums may be recorded. This is merely evidence to demonstrate that such meetings are occurring

---

Thursday, February 2nd, 2023

- Everyone was able to access the Figma prototype through the invite links sent by Jeffrey.
- Chris and King need a minimum entity/data set to test his backend code's functionality.
  - To this end, Jeffrey set up a LucidChart project that the team can collaborate on to create an ER diagram.
  - Short term goal is to complete the diagram as soon as possible and follow it with a clearer database schema.

Friday, February 3rd, 2023

- General questions were raised about the finished structure and content of the ER diagram.
  - The ViolationsList attribute is a list of bans or other warnings the user has received to track problematic behavior in the backend.
  - Some attributes overlapped too much and can be simplified by using the ID attribute to join tables.
  - The player/user class will be an aggregator across games to account for potential different user/player names on any given game.
- The application will be a desktop application rather than a mobile application.
- Jeffrey has started practicing creating Figma prototypes to become more familiar with the program.
- Chris and King are continuing their backend development setup.
- The backend is confirmed to be in Django with a Python framework, while the front end will be React.
- Thomas is continuing documentation efforts and overall sprint set up.

Saturday, February 4th, 2023

- Standup was a quick check-in with King since his responsiveness had slowed down.
  - King was out on military duty and will be back the following Monday.

---

Sunday, February 5th, 2023

- Chris is checking in on the initial Django project with the simple react front-end tonight and doing some cleanup on the ER diagram.
    - Needs a wireframe completed in Figma to envision how the API needs to be accessed.
    - Using jetbrains/pycharm and webstorm professional for Django/React enviroment.
    - Will provide a demo of his progress at Monday's meeting.
- Jeffrey and Thomas set a meeting for Tuesday at 1:30pm to discuss the necessary frames and requirements for the frontend.

Monday, February 6th, 2023

Tuesday, February 7th, 2023

- *See Daily Scrum Documents in GitHub Repository*

Wednesday, February 8th, 2023

- Chris provided some links for Django tutorials:
    - https://www.valentinog.com/blog/drf/
    - https://realpython.com/django-user-management/#create-a-login-page
    - https://docs.djangoproject.com/en/4.1/
- The team is asking for any links for React tutorials as well.
    - Thomas and Jeffrey will look into this.
- Thomas shared notes recorded of Tuesday's front-end meeting.
- Jeffrey has started work on wireframing the authentication pages and some of the user pages.
    - He will use feedback from those to create more formal prototypes.

Friday, February 10th, 2023

- Thomas has looked at Jeffrey's wireframes and provided feedback and changes within Figma. These changes are consolidated into a combined file of all the components as a working prototype.
  - These changes have been approved by Jeffrey, and the ticket is good to be pushed.
- Thomas will work over the weekend to look over the rest of Jeffrey's wireframes and finalize his own. He will also work to get the documentation up-to-date on the GitHub repository.
- Chris and King have been working on the JWT token authentication.
  - King is specifically starting research on alternate SSO methods for Django.
- The BlockList attribute was clarified to be a list of other players that the user has blocked.
- The team needs to develop a layered list of features so that it is easier to understand what is required first and what can be considered more optional.
  - This will be discussed more in-depth at Monday's Sprint Review meeting.
