Team 5 Meeting Minutes
Monday, February 20th, 2023

- Weekly sprint review meeting
- Individual Updates:
    - **King**: Pulled Repo from frontend and backend that Chris has started on, familiarizing himself with the Code, working with Chris on authentication and doing research on it, creating POC with Python, going to meet with Chris for a coding session hopefully to help push progress (might need possibly 2 session)
    - **Chris:** Was not able to make the meeting, continuing work on backend processes to have login authentication completed for this sprint.
    - **Thomas & Jeffrey:** Finished making all of the wireframes for the application, prototype for login service will be finished tonight, Jeffrey has started frontend React framework, Thomas & Jeffrey will meet later this week to
- Thomas walked the group through the partially completed login prototype and wireframe.
- Thomas will work on getting the documentation up-to-date and pushed to the repository.
- Remember to keep items moving through the Jira Board as it will affect how the burndown chart is updated.
    - Need to check in with Chris to see who he wants to code review his changes (i.e., King vs anyone in the team).
- The feature prioritization document will be updated at the end/start of each sprint.
    - Thomas will do a second walkthrough of the features to ensure that we are aligned with the minimum viable product principle.
- Everyone present for the meeting feels good about the progress that has been made.
- Team discussed the upcoming presentation:
    - Thomas will break down the preliminary research article list into equal parts (~ 2 articles per person) so that the team can begin preparing for the midterm presentation.
    - Everyone feels like we are in a good spot. There is still over two weeks left before the presentation is due so there is plenty of time.
    - Main focus right now is to finish the login authentication by our original deadline. Then the team can focus on the presentation and Sprint 2.
- Thomas will be out of town from March 5th - 11th and so will be less reachable and available during that time. He will still have his laptop with him to continue work though.
- Next Steps:
    - Finish creating React frontend for login authentication components.
    - Finish integrating backend login authentications services.
    - Get documentation up-to-date on GitHub.
    - Push tickets through on Jira.
    - Put serious effort into starting the testing process to meeting the March 2nd deadline.
